9 July 2008

FOR IMMEDIATE RELEASE:**STI-Global Ltd wholly-owned subsidiary STISA, Receives R&D Grant****Grant allows STISA to continue fully funded R&D for improving functionality of its Infrastructure Security & Risk Systems for its customers across the Group**

Perth, WA, 9 July 2008 – STI-Global Ltd. is pleased to announce that its wholly-owned subsidiary Strategic Technology Integration, SA (STISA), based in Madrid, has received notice from the Regional Government of Madrid that it has been given approval of grant funding for the project named SACF (Sistema Anticolision para Ferrocarriles) – or Train Anti-Collision System. The project has a budget of €490,813 and STISA has been allocated grant funding for an amount of €171,785 (35%) or A\$286,000. The R&D project is to be completed by 31st of December 2008.

STISA has applied on its own behalf along with other consortia partners, for a number of high profile grant applications for which this is our first success. Tomas Rodriguez, Head of R&D at STISA states, 'although not a big project, it is our first successful proposal and I am confident more will come our way'.

This grant coincides with the work we have been undertaking for several railroad operators in the US around our STI-ACS™ (Anti-Collision System) and also has relevance for other products in our IP Portfolio such as STI-XPT™ (Crossing Protection System) and STI-VITRAC™ (Vehicle Identification Tracking, Recording and Control).

This grant award is validation of STI-Global's key approach to make our R&D department self-funding and has been part of the overall Company strategy to enhance cash flow (or in this case lessen cash outflows) while still being on the cutting edge of Infrastructure Security & Risk Management Systems.
