**FOR IMMEDIATE RELEASE:**

**STI-GLOBAL LTD WINS TENDER FOR QUEENSLAND RAIL**

**STI-Global has won a tender to supply, install & commission a video imaging condition monitoring system for brake pads on QR National Coal rollingstock.**

Sydney, NSW, 15 October 2008 – STI-Global Ltd is pleased to announce that it has been awarded a contract by Queensland Rail for the installation of a brake pad condition monitoring system on their Goonyella Coal Rail Corridor. The project involves the supply, install and commissioning a Brake Shoe Condition Monitoring System. The contract also involves ongoing service support and upgrades and is worth over \$1.0 million.

The installation and commissioning will be undertaken by STI-Global's specialist integration engineers through STISA an ISO 9001 certified company with ongoing maintenance support provided by STI-Global's Perth and Sydney office.

The Condition Monitoring Systems are advanced modular inspection systems using machine vision technology. This provides valuable data about train components to the Railroad client to reduce costs and increase the accuracy of train inspections. The system is ideally suited to heavy-haul and freight operations.
