FOR IMMEDIATE RELEASE:

STI-Global Ltd Acquires RF Innovations Pty Ltd

Transaction Enables STI-Global Ltd to Provide Integrated Infrastructure Security & Risk Systems to Customers

Perth, WA, 26 January 2008 – STI-Global Ltd. is pleased to announce that it has completed the 100% acquisition of wireless connectivity firm RF Innovations Pty Ltd. (“RFI”) based in Perth, WA (www.rfinnovations.com.au).

Subsequent to the announcement made on 13 November 2007 that STI-Global had signed a Conditional Sale & Purchase Agreement for the business of RF Innovations Pty Ltd, Due Diligence and legal documentation was finalised and executed in the space of just over 2 months.

RFI has long been a target for STI-Global given that its technology and products are integral to our current product suite of wirelessly connected, infrastructure security and risk management systems.

RFI is a leading Australian design, research & development and manufacturing company specialising in the production of wireless data products using licensed and free to air channels. RFI's excellence in research and design has been recognised twice by the Federal Government with two AusIndustry Start Grants totalling A\$2.2 million over the past number of years.

Having made progress in developing excellence in wireless technology with new ground breaking applications for Radio Frequency devices, RFI along with STI-Global, will seek to consolidate its market position and capture new markets for its products. STI-Global intends to open up international markets and to deliver a strong customer base for RFI's products. Work has already begun in rolling out the RFI products throughout STI-Global's European operations and in tandem with the Sydney office.

RFI provides STI-Global with vertical integration capability for large-scale manufacturing of STI-XPT™, STI-ACS™, TINS™ and VIGITower™ products. Perhaps most importantly, RFI provides STI-Global with an engineering resource which can be utilised for our worldwide product marketing and installation strategy. The staff of RFI is strongly committed to their company and STI-Global can now offer them an exciting opportunity to further their professional development.

Financially, RFI has a multi-million dollar turnover and is profitable. STI-Global believes that with its global blue-chip client base and value-add system sales, it can significantly enhance the performance metrics of RFI.

Kevin Reichelt, CEO of STI-Global “...believes that we can value-add significantly to the RFI results and the results of STI-Global, so that overall, aggregate shareholder value will benefit substantially.”

Matthew Spaapen, CEO of RFI will remain as CEO and a Board Director as will Dion Simson, Chief Engineer. Joining Matt and Dion on the Board of RFI, will be Kevin Reichelt and Perry Cooper, Executive Director, Finance of STI-Global.

RFI will maintain its operational headquarters in Perth, WA and will operate as a fully owned subsidiary until branding and operational issues are clarified. RFI will work closely with the marketing team of STI-Global based in Sydney, NSW in particular with Dylan Reichelt, Business Development Manager and Kira Bullen, Commercial Manager to ensure appropriate synergies in

Australia. Matthew Spaapen will be shortly making a trip to the STI-Global offices in Madrid to further broaden the RFI marketing activities.
